

# THE GUARDIAN TAPING SYSTEM

Automatically apply the optimal amount of tape to every package with the most innovative tape head and premium tape on the market.

## THE IDEAL SEAL

- **Unmatched Wipe-Down Pressure**
  - Multiple flexible wipe-down mechanisms adapt to any sealing application to ensure full utilization of our tape's adhesive, creating a permanent bond with the carton's fibers for a tamper-evident seal.
- **Folded Edge® Technology**
  - Tape folds over the edges of the package, strengthening areas where most tears and breaks originate and allowing the parcel to be opened without a knife or box cutter, reducing the chances of product damage and injury.

## SUSTAINABILITY & COST SAVINGS

- Guardian's sophisticated technology allows for the use of thinner, lighter tape that reduces material usage and cuts costs — delivering the ideal balance of sustainability and efficiency with each perfectly sealed package.

## ONGOING SERVICE & TECHNICAL SUPPORT

- Guardian is easily retrofittable to nearly any case sealer, and our technical team provides you with preventative maintenance, wear parts, and ongoing service to keep your operation running at maximum performance.

Guardian tape heads are easy to install, improve your case sealer's application efficiency, save your operation money, and reduce unnecessary material waste.

**If you're interested in sustainably optimizing your taping process, the Guardian Taping System is here for you!**
